

H
Claims 1-51 canceled.

52. (new) A mounting system, comprising:

a support rail having a recessed portion at least partially interposed between a pair of rack members; and

a telescoping rail assembly mounted to the recessed portion and at least partially interposed between the pair of rack members.

53. (new) The mounting system as recited in claim 52, the telescoping rail assembly comprising:

a first telescoping slide rail mountable to the support rail; and

a second telescoping slide rail mounted to the first telescoping rail.

54. (new) The mounting system as recited in claim 52, wherein the first telescoping rail assembly does not extend beyond the pair of rack members.

55. (new) The mounting system as recited in claim 52, wherein the telescoping rail assembly has a height approximately one half a height of the support rail.

56. (new) The mounting system as recited in claim 52, comprising a second support rail and a second telescoping rail at least partially interposed between a second pair of rack members in a mirror-image orientation to the first support rail and telescoping rail assembly.

57. (new) A computer rack system, comprising:

a storage assembly including first and second pairs of rack members, the first pair of rack members located at a first side of the storage assembly, and the second pair of rack members located at a second side of the storage assembly opposite the first side;

first and second support rails each having a recessed portion at least partially interposed between the first and second pair of rack members, respectively; and

first and second telescoping rail members mounted to the respective recessed portions such that the first and second telescoping rail members are at least partially interposed between the first and second pair of rack members, respectively.

58. (new) The computer rack system as recited in claim 57, wherein the first and second support rails are substantially identical to one another.

59. (new) The computer rack system as recited in claim 57, wherein the telescoping rail assemblies are substantially identical to one another.

cont'd*

60. (new) The computer rack system as recited in claim 57, wherein the storage assembly is configured to receive a computer component enclosure.

61. (new) The computer rack system as recited in claim 57, wherein the storage assembly is configured to receive a plurality of computer component enclosures.

62. (new) The computer rack system as recited in claim 57, wherein the first and second telescoping rail assemblies each comprise:

a first telescoping slide rail mountable to the support rail; and

a second telescoping slide rail mounted to the first telescoping slide rail.

63. (new) A computer system, comprising;

a storage assembly;

first and second pairs of rack members, the first pair of rack members located at a first side of the storage assembly and the second pair of rack members located at a second side of the storage assembly opposite the first side;

a first support rail having a first recessed portion and a second support rail having a

second recessed portion, wherein the first recessed portion is at least partially interposed between the first pair of rack members and the second recessed portion is at least partially interposed between the second pair of rack members;

a first telescoping rail assembly mounted to the first recessed portion and a second telescoping rail assembly mounted to second recessed portion, wherein the first and second telescoping rail assemblies are at least partially interposed between the first and second pair of rack members, respectively; and

at least one computer component enclosure coupled to the first and second telescoping rail assemblies such that the computer component enclosure is slidably moveable between a first position inside the storage assembly and a second position extending from the storage assembly.

64. (new) The computer rack system as recited in claim 63, wherein the computer component enclosure comprises recessed sections to which the first and second telescopic rails respectively couple.

65. (new) The computer rack system as recited in claim 63, wherein the first and second support rails are substantially identical to one another.

66. (new) The computer rack system as recited in claim 63, wherein the first and second telescoping rail assemblies are substantially identical to one another.

*H1
cont'd*

67. (new) The computer rack system as recited in claim 63, wherein the computer rack system comprises a plurality of computer component enclosures.

68. (new) The computer rack system as recited in claim 63, wherein the telescoping rail assembly comprises:

a first telescoping slide rail coupled to the support rail; and

a second telescoping slide rail couplable to the first telescoping rail and the computer component enclosure.
